* The quarterly summary of accounting statement is not subject to quarterly review by the certified accountant or audit company.

* Explanation on appropriate use of the performance forecast and other special notes

1. Qualitative information concerning the current quarterly financial statement

(1) Explanation on the management result

During the third quarter in the consolidated cumulative period, the Japanese economy showed a gradual recovery in the domestic economy after the new coronavirus infection was classified as a Type 5 Specified Infectious Disease, and the restaurant, leisure, accommodation, and department store industries showed signs of recovery. Furthermore, from June onwards, increases in wages and other items promoted consumption behavior, accelerating the normalization of economic activity. On the other hand, the economic outlook remains uncertain as the yen continues to weaken and prices soar. The economy is gradually recovering as the employment and income environment continues to improve. However, in addition to the prolonged general price rise, there are geopolitical risks such as Russia's prolonged invasion of Ukraine and the increasingly tense situation in the Middle East, as well as interregional risks such as the stagnation of the Chinese economy and moves toward monetary tightening in Western countries. There are such regional disparities in recovery and a sense of uncertainty is observed about the future of the economy.

Under such economic circumstances, for the electronic and communication device business, in addition to sales expansion business mainly in the 5G related market and civil services/public related market, we have been also dedicated to new markets and client exploration to acquire orders from new fields.

We have also worked on enhancement of proposal of our self-developed products by continuously promoting "effort for high added-value products," "expansion and exploration of business field" and "co-development with the company of business tie-up."

As a result, newly explored clients and inquiries are increasing from new markets besides the existing analog high frequency products, including optics related products used for various business-use wireless, digital signal processor, etc. indispensable for high-speed signal processing, millimeter wave band, terahertz products, etc. necessary for wireless transmission of data of large volumes. We are also proactively working on the semiconductor manufacturing facility market, etc.

In the mobile communication field, since the communication common carriers' infrastructure investment was controlled, the demand for the existing products is decreasing. In the government and public sector markets, we have come out of a slow period for projects, and this fiscal year is a period of preparation for new projects. Due to the large increase in the national budget, our company has been receiving orders for large-scale projects one after another since the latter half of last year. Furthermore, we have a high probability of receiving inquiries at this time, so development and design will be our main focus this year. Although the contribution to high performance is limited in this fiscal year, these are large-scale and repeat projects, and we expect them to make a stable and continuous contribution to business results in the following fiscal year and beyond.

Besides, we have won new businesses of drone monitoring device and private satellite project, etc.

Finally in the FA and measurement field, we received an order from a new client at the beginning of the term for the semiconductor reliability test equipment. Since the semiconductor industry will be our country's policy and investment to advanced process will be more and more expanded hereafter, we will work on sales expansion to the semiconductor facility market with our high frequency technology which is essential to semiconductors for communication.

By enhancing proposals of self-developed products along with active promotion of the business domain expansion, we will continue the activities for profit expansion in order to establish the stable business base as the entire electronics and communication device industry.

In the renewable energy business, we have continuously worked on acceleration of development of small wind power plants. In the current period, since there has been a global delay of procurement of the equipment in a number of industries, we increased the number of units for development by taking the measures such as advance procurement of the equipment, etc. In addition, as a result of diversification of fund procurement, 29 units of small wind power plants were newly interconnected in this first quarterly consolidated accumulative period by executing multiple project finances including sustainable loan, etc. We also sold 4 units of small wind power plants.

We are also aiming to establish a new profit base by accelerating the approach to increase the number of the developed units as well as promoting increase of the possessed units to secure stable profit by power selling. On the other hand, since inquiries are increasing for purchase of the small power wind plants by social demand for spreading

of renewable energy, we will consider sellout depending on the market environment.

In order for the stakeholders surrounding us to secure the precise profit structure and growth, we are aiming to build the unique business model in the renewable energy business as a domestic company focusing on owning small wind power plants from this period and expecting to launch various mechanism and structure reformations including the organizations of the same business. Simultaneously, we will contribute to continuous reduction of greenhouse gas by easing the business risk and accelerating development of new renewable energy sources with development of small wind power plants of which unit is small size and risk dispersion and securement of profitability and mobility.

Tokyo Stock Exchange opened the carbon credit market on October 11, 2022 in view of contribution to carbon pricing as a stock exchange in Japan with the result of verification experiment in 2022 to achieve the decarbonated society. We will focus on it since establishment of a new “emission right trading” market is considered to contribute to further expansion of renewable energy market.

As the result of the above, the amount of orders received in this second quarterly consolidated accumulative period was 2,413 mil. yen (26.5% increase compared with the same period of the previous year) and the sales amount was 254 mil. yen (477 mil. yen increase compared with the same period of the previous year). In terms of profit and loss, operating loss was recorded as 276 mil. yen (the operating loss of the same period of the previous year: 484 mil. yen). The quarterly net loss attributable to owners of the parent company was 394 mil yen (compared to the quarterly net loss attributable to owners of the parent company of 460 mil yen in the same period of the previous year) due to a 90 mil yen loss on valuation of investment securities.

In the electronic / communication device business, we will focus on acquirement of new businesses by setting our sales expansion activities of the mobile communication field (infrastructure sharing) public agency / public related market which is expected to continue to transit steadily and where the demand is stably increasing as the center. Furthermore, we will also proactively expand the business domain as well as continuing the activities for profit expansion in order to establish the stable business base as the entire electronic and communication device business by enhancement of proposals for self-developed products.

Our group is proactively considering development of the general environmental business in addition to the renewable energy business not only as domestic expansion but also overseas expansion mainly in Southeast Asia, and will actively conduct investment activities for expansion of the business operation. Our group will further work on CO2 reduction and the measures for global warming with all the Group employees and will proactively disclose information to the stakeholders surrounding us for ESG management and will take a positive challenge to achieve SDGs goals.

Operating results by segment are as follows.

a. Electronic and communication equipment business

In the electronic and communication equipment business, orders received were 2,640 million yen (down 18.9% from the same period last year) due to delays in contract timing for government offices and public-related businesses.

Although sales are slightly behind the initial plan, sales are progressing as planned and amounted to 1,980 million yen (16.1% increase compared to the same period last year). Segment profit was 72 million yen (segment loss was 70 million yen in the same period last year).

In addition, the order backlog is 3,877 million yen (23.3% increase compared to the same period last year), and the reason for the increase is that contracted delivery times with customers are becoming longer due to longer delivery times for semiconductors and non-ferrous metal materials worldwide. Similarly, inventories (parts/materials, work in process, and product inventory) increased by 32.1% compared to the same period last year due to the impact of longer contracted delivery dates.

b. Renewable energy business

In the renewable energy business, we have been working on the development of small wind power plants by utilizing development funds for small wind power plants, co-financing from banks, and funds from sustainable loans. In addition, the small wind power plants and low-voltage solar power plants that we own in Hokkaido and Tohoku are selling electricity steadily.

During the third quarter of the current consolidated cumulative period, 29 new small wind power plants were

interconnected. Additionally, sales increased compared to the same period last year as we were able to sell four small wind power plants. Furthermore, segment profit is also increasing due to steady sales of electricity from our small wind power plants and low voltage solar power plants.

As a result of the above, orders received were 858 million yen (324.2% increase compared to the same period last year), sales were 433 million yen (114.3% increase compared to the same period last year), and segment loss was 14 million yen (segment loss was 78 million yen).
