* Explanation on appropriate use of the performance forecast and other special notes

1. Qualitative information concerning the current quarterly financial statement

(1) Explanation on the management result

After Covid-19 was redefined as Category V Infectious Disease, there has been mild recovery in the domestic economy in the current second quarterly consolidated accumulative period, where recovery of sales has progressed in the industries of eating-out, leisure, accommodation, department stores. Furthermore after June, rising wages, etc. promoted consumption activities and normalization of economic activities has been accelerated. On the other hand, due to progress of weak yen and sharp gain of commodities prices which are simultaneously occurring, the economic status continuously transits under the uncertain conditions.

Under such economic circumstances, for the electronic and communication device business, in addition to sales expansion business mainly in the 5G related market and civil services/public related market, we have been also dedicated to new markets and client exploration to acquire orders from new fields.

We have also worked on enhancement of proposal of our self-developed products by continuously promoting "effort for high added-value products," "expansion and exploration of business field" and "co-development with the company of business tie-up."

As a result, newly explored clients and inquiries are increasing from new markets besides the existing analog high frequency products, including optics related products used for various business-use wireless, digital signal processor, etc. indispensable for high-speed signal processing, millimeter wave band, terahertz products, etc. necessary for wireless transmission of data of large volumes. We are also proactively working on the semiconductor manufacturing facility market, etc.

In the mobile communication field, since the communication common carriers' infrastructure investment was controlled, the demand for the existing products is decreasing. Therefore, we are aiming for and working on sales expansion of infrastructure sharing related devices in the perspective of increasing demand for infrastructure sharing as a method to expand infrastructure by reducing investment.

In regard to proposals for new clients related to mobile communication facilities for overseas, since various restrictions due to Covid-19 have been gradually terminated, we are working on proposal activities to new clients on a remote basis and face-to-face basis.

In the public agency and public related market, the preharvest period of businesses has ended and this term is the preparation period of new business. Along with a drastic increase of the national budget, we have experienced continuous closing of received orders of large projects since the second half of last year. Additionally, probability of order receipt of the current inquiries is also high although we will mainly work on development and design in this fiscal year, which may limit contribution to sales amount of the current period, and we expect that those large and repeated projects will stably and continuously contribute to the performance after the following fiscal year.

Besides, we have won new businesses of drone monitoring device and private satellite project, etc.

Finally in the FA and measurement field, we received an order from a new client at the beginning of the term for the semiconductor reliability test equipment. Since the semiconductor industry will be our country's policy and investment to advanced process will be more and more expanded hereafter, we will work on sales expansion to the semiconductor facility market with our high frequency technology which is essential to semiconductors for communication.

By enhancing proposals of self-developed products along with active promotion of the business domain expansion, we will continue the activities for profit expansion in order to establish the stable business base as the entire electronics and communication device industry.

In the renewable energy business, we have continuously worked on acceleration of development of small wind power plants. In the current period, since there has been a global delay of procurement of the equipment in a number of industries, we increased the number of units for development by taking the measures such as advance procurement of the equipment, etc. In addition, as a result of diversification of fund procurement, 7 units of small wind power plants were newly interconnected in this first quarterly consolidated accumulative period by executing multiple project finances including sustainable loan, etc. We also sold 4 units of small wind power plants.

今We are also aiming to establish a new profit base by accelerating the approach to increase the number of the developed units as well as promoting increase of the possessed units to secure stable profit by power selling. On the other hand, since inquiries are increasing for purchase of the small power wind plants by social demand for spreading of renewable energy, we will consider sellout depending on the market environment.

In order for the stakeholders surrounding us to secure the precise profit structure and growth, we are aiming to build the unique business model in the renewable energy business as a domestic company focusing on owning small wind power plants from this period and expecting to launch various mechanism and structure reformations including the organizations of the same business. Simultaneously, we will contribute to continuous reduction of greenhouse gas by easing the business risk and accelerating development of new renewable energy sources with development of small wind power plants of which unit is small size and risk dispersion and securement of profitability and mobility.

Tokyo Stock Exchange opened the carbon credit market on October 11, 2022 in view of contribution to carbon pricing as a stock exchange in Japan with the result of verification experiment in 2022 to achieve the decarbonated society. We will focus on it since establishment of a new "emission right trading" market is considered to contribute to further expansion of renewable energy market.

As the result of the above, the amount of orders received in this second quarterly consolidated accumulative period was 2,093 mil. yen (6.2% increase compared with the same period of the previous year), and the sales amount was 1,451 mil. yen (34.9% increase compared with the same period of the previous year). In terms of profit and loss, operating loss was recorded as 268 mil. yen (the operating loss of the same period of the previous year: 383 mil. yen), ordinary loss was recorded as 270 mil. yen (the ordinary loss of the same period of the previous year: 364 mil. yen) and the quarterly net loss belonging to the parent company shareholders was 385 mil. yen (the quarterly's net loss belonging to the parent company shareholders of the same period of the previous year: 335 mil. yen) due to recording of 95 mil. yen of valuation loss of investment securities.

In the electronic / communication device business, we will focus on acquirement of new businesses by setting our sales expansion activities of the mobile communication field (infrastructure sharing) public agency / public related market which is expected to continue to transit steadily and where the demand is stably increasing as the center. Furthermore, we will also proactively expand the business domain as well as continuing the activities for profit expansion in order to establish the stable business base as the entire electronic and communication device business by enhancement of proposals for self-developed products.

Our group is proactively considering development of the general environmental business in addition to the renewable energy business not only as domestic expansion but also overseas expansion mainly in Southeast Asia, and will actively conduct investment activities for expansion of the business operation. Our group will further work on CO2 reduction and the measures for global warming with all the Group employees and will proactively disclose information to the stakeholders surrounding us for ESG management and will take a positive challenge to achieve SDGs goals.

Management results by segments are as follows.

a. Electronic and communication device business

For electronic and communication device business, the order receipt from the public agencies and public related continued to transit at a good rate and the amount of received order was 1,755 mil. yen (5.6% decrease compared with the same period of the previous year).

In terms of the sales amount, although we took measures for difficulty of the latest procurement of electronic parts, etc., we could not avoid the impact where the sales concentrates in the second period compared to the plan of beginning of the term, which was 1,147 mil. yen (19.2% increase compared with the same period of the previous year). The segment loss was 43 mil. yen (segment loss was 106 mil. yen in the same period of the previous year).

In addition, the remaining received order was 3,687 mil. yen (48.1% increase compared with the same period of the previous year) and the cause of increase of it is that the agreed delivery dates have been extended due to the globally extended delivery dates of semiconductors and non-iron metal materials. Similarly, the inventory assets (parts and materials, products in process and product inventory) increased by 36% compared to the same period of the previous year due to the extended agreed delivery dates.

b. Renewable energy system sales business

For renewable energy business, we have worked on development of small wind power plants by leveraging development fund of small wind power plants and collaborative loan and sustainable loan fund from banks. In addition, the small wind power plants and low-voltage solar power plants we possess in Hokkaido and Tohoku are selling power at a good rate.

In this second quarterly consolidated accumulative period, we newly interconnected 7 units of small wind power plants. Additionally, since 4 small wind power plants could be sold, the sales amount increased compared to the same period of the previous year. Furthermore, since the small wind power plants and low-voltage solar power plants we possess are selling power at a good rate, the segment profit also increased.

As a result of the above, the amount of orders received was 338 mil. yen (200.0% increase compared with the same period of the previous year), sales amount was 303 mil. yen (168.9% increase compared to the same period of the previous year), and segment loss was 14 mil. yen (segment loss of the same period of the previous year: 34 mil. yen).
