(4) Number of shares issued (ordinary shares)

① Number of term-end shares issued (including own shares)	FY2025 Mar. 1Q	6,554,900shares	FY2024 Mar. 1Q	6,554,900Shares
② Number of term-end own shares	FY2025 Mar. 1Q	61,508Shares	FY2024 Mar. 1Q	61,508Shares
③ Average number of midterm shares (quarterly accumulation)	FY2025 Mar. 1Q	6,493,392shares	FY2024 Mar. 1Q	6,030,853shares

※ Review of the accompanying quarterly consolidated financial statements by a certified public accountant or auditing firm : None

※ Explanation of the appropriate use of earnings forecasts and other special notes

The forward-looking statements, including earnings forecasts, contained in these materials are based on information currently available to the Company and certain assumptions that the Company considers reasonable. Please refer to "Explanation of Forward-Looking Statements, including Consolidated Earnings Forecasts" on page 4 of the attached materials for assumptions used in forecasting earnings and precautions regarding the use of earnings forecasts.

1. Qualitative information concerning the current quarterly financial statement

(1) Explanation on the management result

Forward-looking statements in the text are based on the judgment of the Group (the Company and its consolidated subsidiaries) as of the end of the first quarter of the current consolidated fiscal year.

During the first quarter in the consolidated cumulative period, the Japanese economy showed a gradual recovery in the domestic economy after the new coronavirus infection was classified as a Type 5 Specified Infectious Disease, and the restaurant, leisure, accommodation, and department store industries showed signs of recovery. Furthermore, from June onwards, increases in wages and other items promoted consumption behavior, accelerating the normalization of economic activity. On the other hand, the economic outlook remains uncertain as the yen continues to weaken and prices soar. The economy is gradually recovering as the employment and income environment continues to improve. However, in addition to the prolonged general price rise, there are geopolitical risks such as Russia's prolonged invasion of Ukraine and the increasingly tense situation in the Middle East, as well as interregional risks such as the stagnation of the Chinese economy and moves toward monetary tightening in Western countries. There are such regional disparities in recovery and a sense of uncertainty is observed about the future of the economy.

Under such economic circumstances, for the electronic and communication device business, in addition to sales expansion business mainly in the 5G related market and civil services/public related market, we have been also dedicated to new markets and client exploration to acquire orders from new fields.

We have also worked on enhancement of proposal of our self-developed products by continuously promoting "effort for high added-value products," "expansion and exploration of business field" and "co-development with the company of business tie-up."

In the field of mobile communications infrastructure, our Vietnamese subsidiary has been mass-producing infrastructure sharing equipment since last year. We expect to start considering new models for the Tunnel Association and JR after this. For 6G, we have been commissioned by Waseda University to design and manufacture the RF front-end parts for 100G and 300GHz wireless systems to be used in industry-academia joint research, and this year will be the final year. In addition, we are actively investing in development with an eye to the future, such as participating in research and development of flexible waveguide technology for Beyond 5G.

In the government sector, the number of new inquiries is increasing in line with the expansion of the national budget. In response to this, we will focus on receiving orders for large and continuous projects with an eye toward medium- to long-term growth.

In the field of public projects, we have high expectations for the demand to update aging radio equipment of major railway companies. In particular, we are focusing on providing commercial radio systems for trains that utilize the latest technology to improve safety and operational efficiency, thereby aiming to contribute to improving the safety of railway operations. In addition, we have completed the design and development of drone monitoring equipment and will move to the mass production stage. We are preparing to establish a supply system to quickly respond to market demand after this.

Finally, in the FA and measurement field, with the semiconductor industry becoming a national policy in Japan and investment in cutting-edge processes expected to continue to expand more and more after this, we are strengthening our PR activities for semiconductor reliability test equipment, leveraging our strength in high-frequency technology, which is essential for communications semiconductors.

By steadily implementing strategic activities in each field, we expect to achieve this year's plan smoothly.

In the renewable energy business, we will continue to develop solar power plants and small wind power plants, increase the number of plants we own, and strive to secure stable profits through electricity sales. At the same time, in addition to the traditional revenue from sales of electricity and sales of power plants, we are promoting business diversification by promoting consulting for power plant development for customers and also construction contracting for power plant installation, utilizing the know-how we have cultivated in power plant development to date.

In the development of solar power plants and small wind power plants, we are promoting development at low cost by utilizing the power plant development know-how we have accumulated so far. For clients who have acquired large-scale business sites and are planning to build large-scale megawatt-class solar power plants, we have begun to provide

a wide range of practical services, utilizing our abundant know-how, specialized knowledge and experience in the construction of solar power generation facilities, such as measures for local residents and compliance with various laws and regulations.

In addition, for the new development of solar power plants that utilize grid storage facilities, we have begun to build a new business model that will consistently manage everything from securing the power generation site to selling electricity to power companies. Grid storage facilities are attracting attention as a means of contributing to the stable supply of renewable energy, the amount of power generated of which varies greatly depending on the weather and time of day. We will make maximum use of the various know-how we have accumulated based on our track record in developing power plants to promote the sale and management of storage facilities in order to build optimal systems.

Regarding the development of a small hydroelectric power plant project on Flores Island, East Nusa Tenggara Province, Indonesia, in which we are participating as a joint venture, the construction work is progressing toward completion by August 2024. We will promptly notify you when this project is completed.

As a result of the above, orders received for the current consolidated fiscal year amounted to 1,844 million yen (up 47.2% from the same period last year), and sales amounted to 972 million yen (up 58.9% from the same period last year). Regarding profit and loss, operating loss was 13 million yen (operating loss 211 million yen in the same period last year), ordinary loss 14 million yen (ordinary loss 204 million yen in the same period last year), and net loss of this period attributable to shareholders of the parent company was 19 million yen (net loss of this period attributable to shareholders of the parent company was 222 million yen).

Demand for electronic and communication equipment has been steadily increasing, and is expected to remain strong also after this. Our activities of this year include delivering new orders for government agencies on time and without quality issues, hiring careers who can start work right away, expanding production floor space, increasing production capacity through capital investment in measuring instruments, and strengthening information security in the company. We will continue to work to expand our group's profits by proactively expanding our business domain and strengthening our proposals for in-house developed products, in order to establish a stable business foundation for the electronic and communication equipment business as a whole.

Our group is proactively considering development of the general environmental business in addition to the renewable energy business not only as domestic expansion but also overseas expansion mainly in Southeast Asia, and will actively conduct investment activities for expansion of the business operation. Our group will further work on CO2 reduction and the measures for global warming with all the Group employees and will proactively disclose information to the stakeholders surrounding us for ESG management and will take a positive challenge to achieve SDGs goals.

a. Electronic and communication device business

In the electronic and communication equipment business, orders from business partners took the impact of longer lead times for parts procurement into consideration, and orders came in at 1,692 million yen (up 72.1%).

Sales exceeded the initial plan of this period, reaching 843 million yen (up 88.7% year on year). Segment profit was 64 million yen (segment loss of 112 million yen in the same period last year).

In addition, backlog of orders was 5,110 million yen (up 32.8% year on year), the reason for the increase is that the delivery time of contracts with customers is getting longer due to the longer delivery time of semiconductors and non-ferrous metal materials worldwide. Similarly, inventory (parts and materials, work in progress, and finished goods) also increased 12.9% year on year due to the impact of longer delivery time of contracts.

b. Renewable energy system sales business

In the renewable energy business, sales were 129 million yen (down 21.8% year on year), and segment profit was 11 million yen (up 2.8% year on year), due to income from selling electricity from solar power plants and small wind power plants owned by the company, as well as management and maintenance of power plants sold and construction contracts associated with the construction of power plants.

Explanation of future forecast information such as consolidated performance forecast

This period will be an irregular seven-month period from April 1, 2024 to October 31, 2024. As for the performance forecast, we are currently in the process of collecting and analyzing data from each business division, and will announce it as soon as it is calculated.
