- * The quarterly summary of accounting statement is not subject to quarterly review by the certified accountant or audit company.
- * Explanation on appropriate use of the performance forecast and other special notes

 Description concerning the future of performance forecast, etc. described in this document is based on the information currently obtained by us and the certain precondition judged as reasonable, and the actual performance, etc. may drastically vary due to various factors. Please see p.4 "Explanation on the Future Forecast Information of the Consolidated Performance Forecast, etc." for assumption as the precondition of the performance forecast.

1. Qualitative information on the results for this quarter

(1) Explanation on management results

Matters regarding the future in the text are based on the judgement of our Company group as of the last date of this quarterly consolidated accounting period.

(1) Financial situation and aspect of management results

Although restrictions on economic activities due to the expansion of novel coronavirus (COVID) infection have been relaxed, the economy of our country during the consolidated cumulative period for the third quarter has been further unsettled and transitioning in an uncertain situation, fueled by the trend and outlook of the US-China issue, uncertainty relating to global politics, impact from worldwide shortage of semiconductors, high price of crude oil, etc. on the world economy, worsening of the Russia/Ukraine war in this fiscal year, and price increases of various goods including oil, electricity and gas.

Under such managerial environment, we focused on sales expansion mainly in the 5G-related market, governments and public-related markets with respect to the electronics/communications equipment business, and also emphasized on new markets and customer development to receive orders from a new domain as no-contact sales (inside sales) due to COVID to meet the changing need of the times such as website renewal/enrichment to increase new customers and their inquiries.

Proposal of products developed on our own was also strengthened while continuously promoting "efforts for high value added to products," "expansion/cultivation of new business domain" and "joint development with affiliates."

As a result, newly developed customers and inquiries from new markets increased, including optical products used for various transceivers in addition to traditional analogue high-frequency products as well as digital signal processing devices essential for high-speed signal processing, millimeter wave products necessary for wireless transmission of mass data, terahertz band frequency products, etc., and we are aggressively engaging in efforts like "Beyond 5G/6G industry-university joint research."

In the field of mobile communications, the demand for existing products is in trend of decrease due to the influence of infrastructure investment control on each carrier; therefore, we are targeting sales expansion of equipment relating to infrastructure sharing by expecting increased demand of infrastructure sharing as a method to limit investment and expand infrastructure.

With respect to mobile communications equipment for overseas, various restrictions from COVID have been gradually loosened and we resumed remote and in-person proposal activities to new customers.

In the public area, the demand of transceivers, optical transmission devices for disaster prevention and surveillance systems, digital signal processing devices, etc. has been increasing and we are targeting further sales expansion. We also make efforts to ensure long-term and stable order receipts by participating in national projects as the "Measures Concerning National Resilience" from the development stage.

Other than that, we plan to promote aggressive expansion of business domains including implementation of technology developed on our own for surveillance units targeting the drone business market, participation in the private satellite business, etc., and at the same time continue activities for profit expansion for our Company group to establish the stable business foundation for the overall electronics/communications equipment business by emphasizing the proposal of products developed on our own.

In the renewable energy business, we have been engaging in development of small-size wind power plants by utilizing proceeds by selling power plants up to the previous periods, syndicated loan by banks, sustainable financing, etc. During the consolidated cumulative period for the third quarter, 28 units of small-size wind power plants were newly interconnected in Hokkaido and Akita. 14 units of small-size wind power plants will also be newly developed in areas with good wind conditions in Hokkaido with sustainable financing, etc. Furthermore, 30 units of small-size wind power plants will be newly developed with a green loan in the form of a syndicated loan. This green loan limits its use to development of small-size wind power plants and transparency is ensured with reporting of fund usage and actual performance after financing. For this case, a second opinion was acquired from R&I (Rating and Investment Information, Inc.) with respect to adequateness as a green loan.

To ensure elaborate profit structure and growth potential for stakeholders in our company, we started reformation of various organizations and structures including the organization for this business in order to create the unique business model in the renewable energy business as a domestic company mainly including ownership of small-size wind power plants starting this period, in anticipation of implementation of IFRS (international financial reporting standards) within the shortest time. At the same time, we contribute to continuously reduce greenhouse gases by developing small-size wind power plants with small per-unit size to reduce the business risk by ensuring risk diversification and profitability/mobility and accelerating development of new renewable power sources.

As measures for the upcoming periods, we plan to engage in diversification of power sources for the future, by participating in medium- and large-scale projects such as large-size power plants (1.984MW) in Nemuro City, Hokkaido as well as in small water power plant projects in Flores Island, Nusa Tenggara Timur, Indonesia.

Based on the above, the amount of orders received during the consolidated cumulative period for the third quarter was 3,456 million yen (a 25.5% decrease from the same period of the previous year) and the sales was 1,908 million yen (a 54.0% decrease from the same period of the previous year). Regarding the profit and loss, the operating loss was 477 million yen (the operating profit for the same period of the previous year was 231 million yen), the ordinary loss was 484 million yen after recording 38 million yen of foreign exchange profit from the influence of rapid depreciation of yen (the ordinary profit for the same period of the previous year was 196 million yen), and the quarterly net loss attributable to stockholders of the parent company was 460 million yen after recording 45 million yen of gain on sale of fixed assets as extraordinary profit (the quarterly net profit attributable to stockholders of the parent company for the same period of the previous year was 139 million yen).

For the electronics/communications equipment business, demand continues to grow steadily and is expected to remain strong; therefore, we continue to promote sales expansion activities in existing markets. We also promote aggressive expansion of the business domain by entering new markets. We started to receive orders from new markets and will continue activities to increase profits for our Company group to establish the stable business foundation in the overall electronics/communications equipment business. On the other hand, it is not possible to avoid the influence of difficulties in procuring electronic parts in the world and the sales expected at the beginning of the period has been delayed, making it a factor to suppress performance. We will continuously make efforts to take measures to resolve difficulties in material procurement.

Our Company group is considering to aggressively engage in overseas countries mainly in Southeast Asia without remaining in Japan not only for the renewable energy business but also for the overall environmental business, and will work on investment activities to expand operations of this business. Our Company group will make efforts to take measures for CO2 reduction and global warming more than ever along with all employees in the group and challenge ourselves to positive information disclosure for ESG management as well as for accomplishment of SDG goals.

Management results by segment are as follows.

a. Electronics/communications equipment business

We took measures for recent difficulties in procuring electronic parts, etc. in the electronics/communications equipment business, but were unable to avoid the influence. The sales and segment profit did not reach the plan at the beginning of the period due to sales being pushed back to the next period resulting from delay in delivery of some parts, i.e., the amount of orders received was 3,254 million yen (a 4.6% increase from the same period of the previous year), the sales was 1,706 million yen (a 32.3% decrease from the same period of the previous year), and the segment loss was 70 million yen (the segment profit was 368 million yen for the same period of the previous year).

b. Renewable energy business

Small-size wind power plants and low-pressure solar power plants we own in Hokkaido have been continuously selling electric power during the consolidated cumulative period for the third quarter. Although low-pressure solar power plants were sold, the sales and segment profit decreased due to the push-back from selling the solar power plant in Noboribetsu City, Hokkaido during the previous period (June 2021)

Based on the above, the amount of orders received was 202 million yen (an 86.8% decrease from the same period of the previous year), the sales were 202 million yen (an 87.6% decrease from the same period of the previous year), and the segment loss was 78 million yen (the segment profit for the same period of the previous year was 158 million yen).
