## Tamagawa Holdings Announces Start-Up of Equipment Developed and Manufactured on Commission from the Public and Social Infrastructure Fields

Tamagawa Electronics Co., Ltd. ("Tamagawa Electronics"), a subsidiary of Tamagawa Holdings, has been engaged in ongoing efforts to strengthen its order receipts in the fields of public and social infrastructure with a view to enlarging its business expense. As a result of such efforts, Nippon Airport Radio Service Co., Ltd. has commissioned Tamagawa Electronics with the development and manufacture of an Airport MCA Optical DAS System ("Optical DAS System") which was recently put into operation at Narita International Airport, with particulars as follows.

### 1. Outline of the Optical DAS System

The Optical DAS System delivered by Tamagawa Electronics is an optical transmission system designed to increase the number of communication circuits and augment functionality in order to cover dead zones. A special characteristic of the system is its scalability in increments of one unit, enabling the ready expansion of the wireless area. The system can be operated in combination with an Ethernet based monitoring application enabling the monitoring of the equipment while in operation. A reporting function will dispatch an email to a registered recipient in case of an abnormal event.

### 2. Further outlook

Tamagawa Electronics will continue to widen the business expense of its electronics and telecommunications equipment operations with the aim to create stable sales and earnings structures.
